Purpose

Our group likes stars, so we wanted to research about them.

Hypothesis

We heard of many place, whose name originated from stars in Japan.

We believed the Tsugaru area has places whose names originated from stars

Procedure 1

Our group researched about stars in Japan by using internet and we chose some cities. Just then we discovered Mino, Hoshioka, Kudamutsu etc. We researched about Kouno city

The Amano river flows through the middle of Kouno city. This place is the origin of the name of Amano. We understood the river water is called Amano river.

Procedure 2

Next, our group chose some cities from about stars. Just then we discovered: Tagaranosawa, Matsutano sawa, Modansawa etc.

But they no relation with stars name. We understood relation with Asia language

Result & Consideration

As a final conclusion we couldn't find a city in Aomori that has a name related to stars. We are very sad. But, we found there are related to mountain: Hoshinokoyama etc and temple's: Shoukokuzi etc in Japan..

Next we want to look into the relationship of star names and mountains and temples.
