

Summary

We started this study because we wanted to see if there was something we could do by using apples.

We found out that apple honey consists of sugar called

"sorbitol" through this study,

but there is no difference

of sugar content between

apples with honey and

apples without honey.

About Honey of Apples

We were the most surprised when we each ate different apples while pinching our noses.

We didn't feel the differences of tastes between the apples.

In fact, we can taste the differences of apple by the smell of honey.

The mystery

of apple honey

MEMBER

The identity of the nectar

Honey and sugar content

Sorbitol comes from corn syrup, but is also found in nature.

There is no relationship in the honey included in Apple and the Sugar Content of the Apple.

About Variety

"Fuji" and "Hokuto" make good honey
"Orin" and "Jona-gold" are difficult to make into honey,
