

Endangered Species:

Hokkaido
Dandelion

HABITAT:

From "Hokkaido" to "kyushu"
low lands, mountains, forests
and so on.

CHARACTERISTICS:

The flower is yellow.
Their stem is reddish brown.

Consideration

~What we can do now~

First:

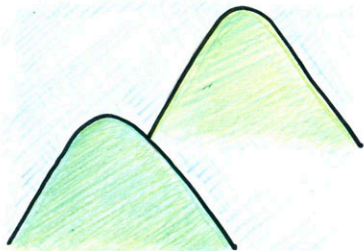

We should keep the natural
environment clean and
beautiful. We should be
responsible when throwing
away trash.

Second:

We should hold events where
people can enjoy removing
foreign species trash.

Endangered and Foreign Species

Hirosaki High
Minami School
Group 10

11HR

Purpose

There are a lot of endangered species in Mt. Kudoji.

We wanted to know what measures are taken to prohibit endangered species from decreasing.

Foreign Species

Red-eared slider

HABITAT:

North America and East America.

CHARACTERISTICS:

- Length is 20cm ~ 30cm
- Neck has red spots until adulthood, then they disappear.

The first Result of Our Research

Endangered species increased because the people destroyed the environment.

Secondly,
Foreign species invaded.

We think that it is difficult to prevent the invasion because we don't notice that there are many foreign species around us.
