

Issues

- The risk of radioactive material leakage.
- The number of the technical workers for nuclear power plants tends to decrease because of risks of nuclear accidents.

Conclusion

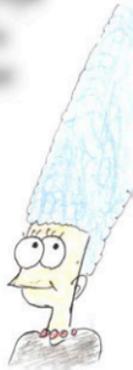

- It's necessary to continuously secure personnel capable of safely managing the entire work.
- We need the latest technology development to reduce the exposure dosage in the waste furnace work.

What's Atomic Energy?

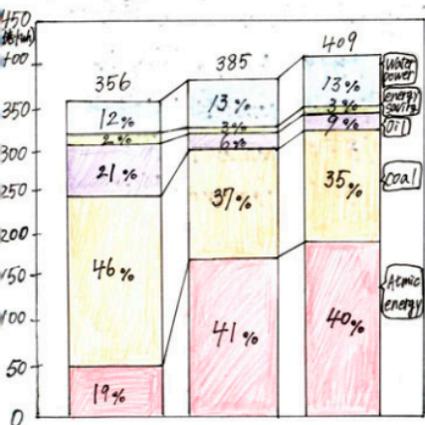

13HR - Group 10

Hirosaki Minami High School

Purpose

- We want to know the present conditions of a nuclear power plant. We should think about the future of nuclear energy.
- We'd like you to know more about nuclear energy and tell many people.

Nuclear Power Works

- Nuclear reactors are designed to sustain an ongoing chain reaction of fission. They are filled with a specially designed, solid uranium fuel and surrounded by water, which facilitates the process.
- This heat is used to create the steam that will spin a turbine, which powers a generator to make electricity.
