

★ How to make a new breed of rice ★

① <crossbreeding>

- We combine good breeds such as "Ou 341" and "Yamagata 40"

② <Individual selection>

- Many thousands of rice seedlings are checked by us. We select some of the excellent individuals.

③ <System selection>

- We select between five and ten seedlings and we grow the new breed candidates.

④ <New breed candidates>

- These will acquire both good points and bad points as encouragement breeds.

<Summary>

- We have learned about little known rice.
- We found new rice breeds need many processes and long periods of time to make.
- Aomori rice has the most suitable recipes.

We talked about three Aomori rice types, so we want to eat these!

< Purpose >

- We want to know about three types of Aomori rice and their strong points.
- We think that many people want to know about Aomori rice.

< The matter that we studied >

1. Aomori rice features.
2. How to make a new breed of rice plant.

< Three kinds of Aomori rice Strong Points >

TSUGARU ROMAN

- TSUGARU ROMAN has cold resistance, a light taste, moderate stickiness and a soft texture.

MASSHIGURA

- MASSHIGURA has moderate elasticity, little stickiness and a light taste.

SEITEN NO HEKIREKI

- SEITEN NO HEKIREKI is a new breed of rice.

It has a delicate, sweet taste, moderate hardness and stickiness, so it became a "special A rice".
