

# AREDLIST

Redlist is a graph that divides organisms inhabiting the country specified.

## EXTINCTANIMALS

For example...

- Japanese wolf
- Toki
- Japanese crane etc...

## Conclusion

The cause of the decrease in paleontology is not only the natural phenomenon but also some creatures are driven to extinction by human.

I think more people should know about its existence.

Our challenge is how to get to know about ancient creatures.

# About creature became extinct

Hirosaki Minami  
High School  
12 #12 Group 4

1st Akiko Minami  
2nd Akiko Minami  
3rd Akiko Minami  
4th Akiko Minami

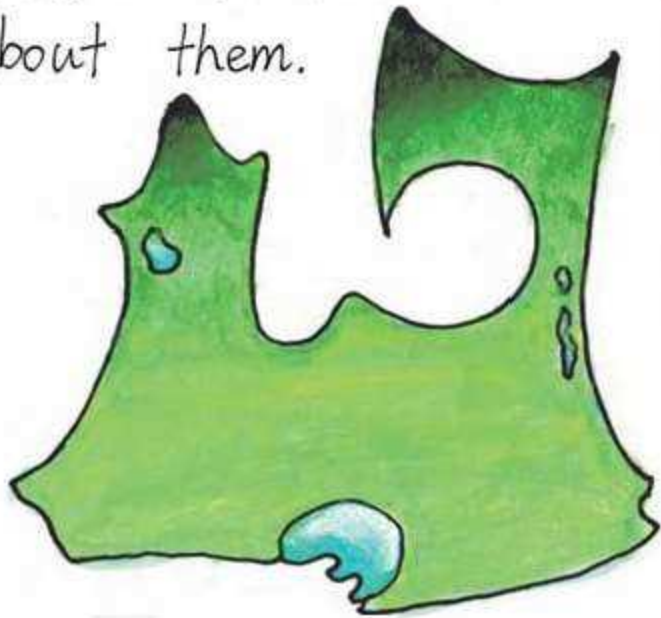

# PURPOSE

We wanted not to forget extinct creatures and we hope they are known to many people.

# MOTIVE

We are interested in extinct creatures. So we wanted to find out about them.

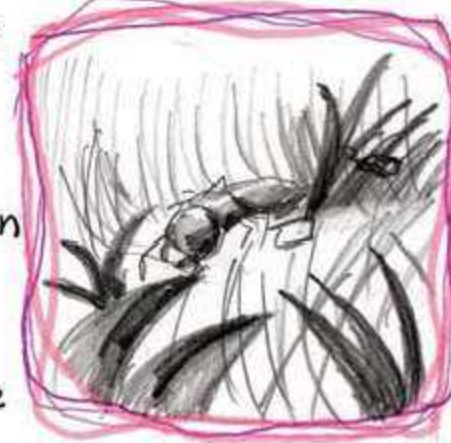

## Iwakisankuzira

It is found fossilized about 1 million to 7 million years in the foot of Mt. Iwaki.

## Hyotanhosohiratamusi

Species presumed to be extinct because there are few discovered individuals and they can't cope with environmental changes.

## Meganeu

A large bird native to Russia, said to have lived in Aomori Prefecture in the past. It has become extinct due to overfishing etc.

## Potamogedondentatus

It's registered with Red list. It was confirmed in the southern part of Tuguru Peninsula and Hukuoka.
