

# Kinds of Weather symbols

- clear      ● drizzle
- ⊙ sunny      ● rain
- ⊙ cloudy      ◐ mixture of snow and rain
- ∞ haze      ⊗ snow
- ⊙ dust storm      ⊕ small hail
- ⊕ snow storm      ⊕ hail
- ⊙ fog      ◑ thunder storm

# Summary

The current, weather forecast understands in detail about precipitation. Therefore, it is easy to warn of disasters like floods and landslides but we don't know everything about where these disasters occur. So, in the future, I think we need to collect more information about weather and process that information to be certain of the weather forecast.

## Purpose

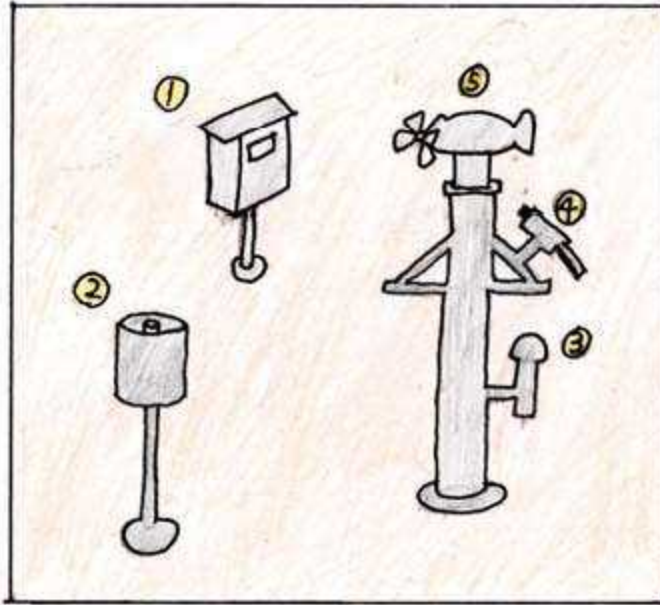

We usually see the weather forecast

We were interested in the weather forecast

So, we researched how to decide it.

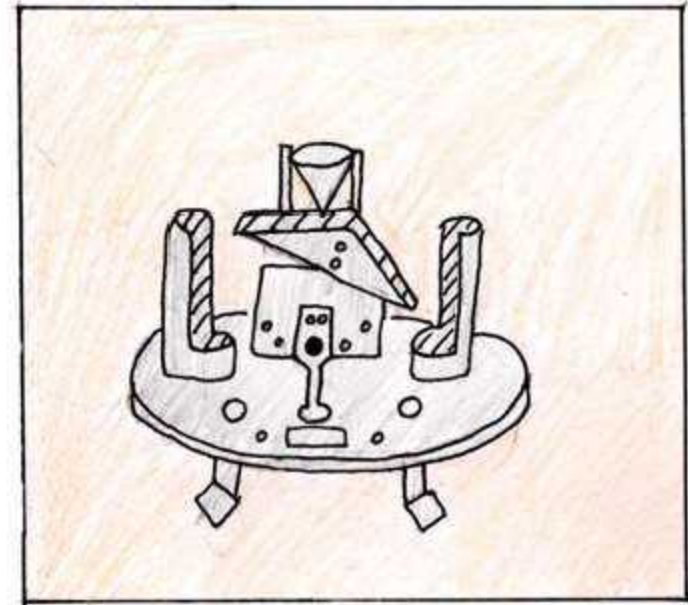

Among them, we researched various especially important things related to precipitation.

## Amedas

- ① Date converter
- ② Rain gauge
- ③ Thermometer
- ④ Sunshine meter
- ⑤ Wind direction wind speed device

## Precipitation

Precipitation is measured by the rain gauge

The rain gauge measured every 5 mm

Solids like hail and snow are measured after melting in water.
