(Rice harvest)
- October Harvest
(Dry fir, Make brown rice Inspection, Grade inspection)

Japanese rice

Mori no kumasan
(Kumamoto prefecture)

Yume pirika
(Hokkaido)

Tuya hime
(Yamagata prefecture)

Koshi hikari
(Nigata prefecture)

Summary

Aomori prefecture was blessed with a natural environment but we found that farmers had some hardships.

I would like to continue to eat thanks to the hard work and peace of mind of the farmers.

The process before

We get safe rice

Motivation to investigate Rice making and rewording

I wanted know what the farmers are doing, what kind of environment they are growing rice in, and the process and difficulties until rice is made.

Why rice is white

It uses the sunlight to make carbohydrates from carbon dioxide and water. The place where starch is a white bag, and since many overlap, it looks white as a whole rice.

Rice Meister Today

Rice making and rewording

- You can grow it from scratch with your own hands.
- You can feel the joy of living with nature.

About pesticides

The purpose of using pesticides is to protect rice plants when they become sick or get pests.

There are three types of pesticides

The first is a herbicide, an agrochemical used to kill weeds.

The second is a pesticide that controls fungi and bacteria that cause crop diseases.

The third is an agrochemical that uses pesticides to control

negligence that harms crops.

Environment and characteristic of Aomori

Aomori Prefecture has many deep forests and a lot of snow. The thawed water becomes stored in the forest, which makes the rice delicious.

Aomori Prefecture is conducting soil improvement and soil management as the "Japan's healthiest rice making campaign".

What is soil improvement?

Improve the condition of the rice so that the crop grow well.
