

## About Juno heart Mating

Juno heart crossing is done by hand with artificial pollination.

Cherries are not pollinated by pollen of the same variety.

So it is necessary to pollinate by people and insects

3

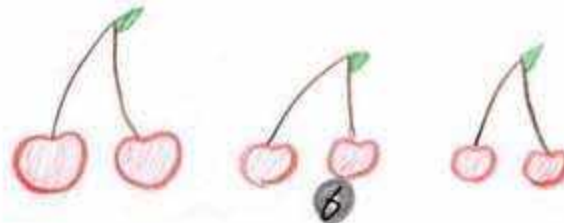

## Summary

Examination of Juno heart's crossing revealed that sugar content and acidity were better than Sato Nishiki.

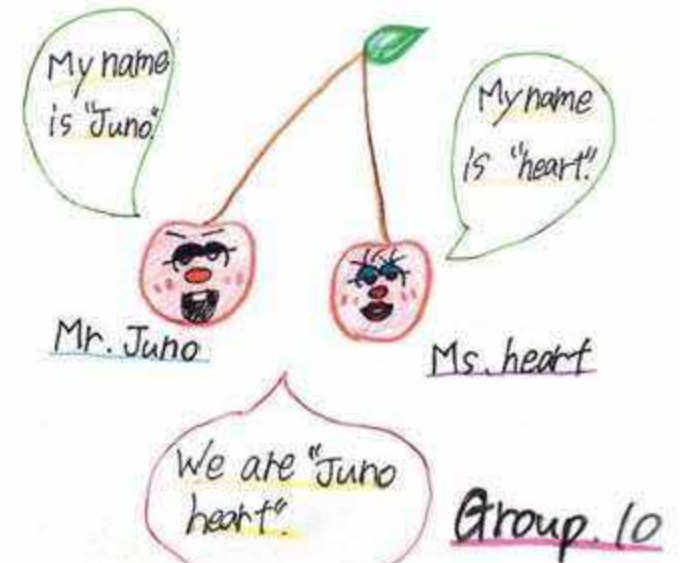

However, this is unknown to many people in and outside the prefecture.

To know about Juno heart and to have it eaten, we should think about recipes mainly for young people and promote overseas, etc.

Thank you for reading.

## Juno heart's Cross breeding Mechanism

## Inquire into purpose

Purpose is to inquire into "Juno heart's" cross breeding mechanism and spread in Aomori prefectures new industry.

## "Juno heart's" feature

- Crossing between the Benishuho and summit.
- The flesh is hard and has moderate juice making it easy to leave the seeds and eat it
- About Sugar content 20 degrees Brix.  
Acidity pH 5
- Size 3L (width 2.8 cm)
- Harvest season Early to mid-July

## Secret Birth story

In May 2005, a fire broke out at the Apple Research Institute in Gonohe machi, where Juno heart's log was located.

The fire approached just three logs before the log, but it escaped the damage by the fire fighting of the residents.

The name is derived from the goddess "Juno", who manages the happiness of Roman mythology, and the fruit is heart-shaped.

## Juno heart's present

Among the Juno hearts, those that are particularly large and have been recognized in quality inspections are called "Aomori Heart beat".

Size 4L (width 3.1 cm)

Now, about 50 producers in Nanbu Town are working together to aim for branding.
